Bernard Schorle,

On the 18<sup>th</sup> of July, we briefly met, expressing our concerns of Page Pit.

Is breathing in toxic gases normal and safe for our community? If they are, why don't they release them during the day while most people are at work. Could it be, they don't want to breath them in themselves.

The drinking the water issue: They rap water to all the homes they own but forgot about us little people. That's right, you said their's was contaminated and are was not. But we all live within a quarter mile of the pit. What, about the 2 neighbors that die within a year of

each other from cancer. The person had metal detected in their system. But once we receive the medical reports, we will know the truth, won't we.

I guess my main concern is: Is it safe for my 8 children, animals, spouse + me?

Who will buy our homes when we're ready to sell, with all these issues and not one explainable reason for it? Why are our taxes higher every year?
